

## About Your New Recycling Cart!

July 1, 2014

Going Green just got bigger with this 96 gallon recycling cart! Five times larger than our old recycling bin, curbside recycling is now more convenient than ever. Larger carts lead to more recycling. More recycling leads to more economic, environmental and social benefits. With today's roll out of 40,000 of these 96 gallon carts, we're proud to take an other significant step in making Memphis a more sustainable city.

The Memphis County Solid Waste department works hard to provide environmentally responsible collection and disposal of trash, yard waste, and recycling. Starting July 1, we have hired a new company, Inland Waste Services, to provide curbside collection service to your home and new 96 gallon recycling carts. Over the next few years, working alongside the Memphis-Shelby County Office of Sustainability, and with our recycling partner ReCommunity, we are planning on providing 96 gallon carts to the entire city. So please join me in this recycling effort, whether at work, on the go, or with our new 96 gallon recycling carts.

Please take the time to learn more about the new recycling program in the enclosed packet. If you have any further questions, please contact us at 901-636-6500. Or visit the City of Memphis recycling website.

Thank you for all you do to benefit our great city.

Sincerely,

Memphis Division of Public Works
